Features:

Injen's Filter Monitor allows you to quickly inspect the filters performance by monitoring the restriction level of the filter. As dirt and debris builds up onto the filter media, a restriction is created causing a vacuum affect to pull the service indicator needle built into the Injen Filter Monitor. As the filter goes through its service, the service indicator needle will move from green, yellow and red depending on the filters condition. No need to remove the filter from the intake kit or engine bay to inspect the filter. Saving you wasteful time and money from unnecessary service and filter replacements.
